Personas & Journeys

Last updated: 25 Oct 2026 · Source: staging branch @ 55ce58a

In this document: Part A — The 12 personas · Part B — End-to-end device journey · Part C — Persona profiles and journeys

PART A

The 12 personas

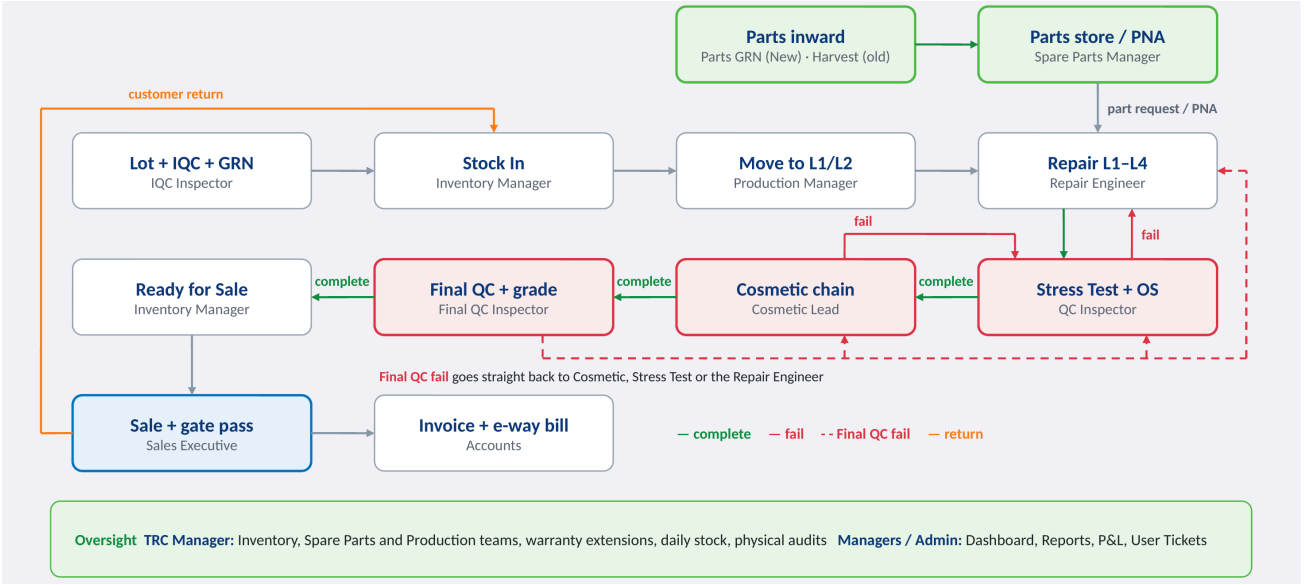

Twelve personas cover every role that handles a device, from lot intake to sale and oversight. Each is named by role only. App roles marked `custom role` have no built-in role in the code and are set up through the Permission Matrix (see Access & Security).

#	Persona	App role	What they do
1	**IQC Inspector**	`iqc_inspector`	Brings every purchased lot into the system: creates the lot, inspects each device in IQC, and maps it to a GRN.
2	**Inventory Manager**	`inventory_manager`	Owns stock outside the repair line: Stock In, floor movement, scrap, Ready for Sale, and holding tags for staff.
3	**Production Manager**	`custom role`	Runs the repair line from L1/L2 to Final QC: plans lots, moves tags to engineers, reassigns work, and reports team productivity.
4	**Repair Engineer (L1/L2, L3/L4)**	`l1 / l2 / l3_engineer`	Repairs devices: diagnoses each tag, requests parts, records PNA when a part isn't available, and scraps tags beyond repair.
5	**QC Inspector (Stress Test)**	`qc_inspector`	Tests every repaired device: runs the stress test, installs the OS, runs system diagnostics, then completes or fails it.
6	**Cosmetic Lead**	`cosmetic_manager`	Runs the cosmetic chain: Cleaning, Putty, Dry Sanding, Masking, Painting and Water Sanding, then completes or fails each tag.
7	**Final QC Inspector**	`qc_inspector / custom`	The last check before sale: diagnoses each device by hand and assigns its grade, or fails it back to the stage that needs rework.
8	**Spare Parts Manager**	`spare_parts_manager`	Runs the parts store: books new parts through Parts GRN and harvested parts from scrap, and fulfils engineers' part requests.
9	**Sales Executive**	`sales / sales_manager / telecaller`	Sells Ready for Sale stock: blocks tags, submits and records sales, raises delivery challans, and handles returns and rentals.
10	**Accounts**	`custom role`	Closes the money loop: generates invoices and e-way bills, records payments, and checks the sales list and daily stock.
11	**Managers / Admin**	`admin / Sub Admin`	Runs the business from the numbers: dashboard, reports and P&L, and resolves the tickets users raise.
12	**TRC Manager**	`custom role`	Leads the TRC: oversees the Inventory, Spare Parts and Production teams, approves warranty extensions, and owns daily stock and audits.

PART B

End-to-end device journey

A device passes three quality checks before it can be sold. Stress Test, the Cosmetic chain and Final QC each complete a tag forward or fail it back; Final QC can fail straight back to Cosmetic, Stress Test or the Repair Engineer. Parts come in new through Parts GRN or harvested from old devices. Customer returns come back to Stock In.

PART C

Persona profiles and journeys

One page per persona: profile, goals, frustrations, and the journey through the app, with the module used and the pain point or improvement idea at each step.

1. IQC Inspector

Brings every purchased lot into the system: creates the lot, inspects each device in IQC, and maps it to a GRN.

1

Team: Intake
App role: `iqc_inspector`
Where they work: Intake bench with a barcode scanner; pallets of 50–200 devices.
Main modules: GRN, Lot Overview, IQC Line Items

GOALS

- Inspect the whole lot the day it arrives
- Record condition accurately so prices are fair
- No device without a tag

FRUSTRATIONS

- Retyping details for identical models
- Bulk-upload errors that are hard to see
- Not knowing which invoice a lot belongs to

User journey

Step	What they do	Where in the app	Pain point / idea
1. Create lot	Records supplier, invoice and quantity	`Lot Overview`	Invoice details in one place
2. Inspect	Checks parts and condition of each device	`IQC Line Items`	Repetitive entry for same models
3. Add assets & tags	Adds assets; assigns Tag Numbers	`IQC Line Items`	Clear bulk-upload error table
4. Map to GRN	Maps inspected tags to the GRN	`GRN`	One step moves tags to Stock In
5. Hand off	Tags land in Stock In for Inventory	`Inventory Manager`	Confirm the whole lot moved

2. Inventory Manager

Owns stock outside the repair line: Stock In, floor movement, scrap, Ready for Sale, and holding tags for staff.

2

Team: Inventory
App role: `inventory_manager`
Where they work: Desk with the dashboard open; walks the racks when a count looks wrong.
Main modules: Stock In, Floor Movement, Ready for Sale, Block Tags, Extended Warranty

GOALS

- Stock In moves to production without delay
- Every tag has a known location
- Ready for Sale stock is accurate for sales

FRUSTRATIONS

- Tags sitting in Stock In unnoticed
- Floor moves made without a log
- Blocked tags nobody releases

User journey

Step	What they do	Where in the app	Pain point / idea
1. Receive Stock In	Checks tags arriving from GRN	`Stock In`	Counts match the GRN
2. Move to Production	Sends tags to the Production Manager	`Stock In → Production`	Bulk move in one step
3. Floor movement	Moves tags between locations and entities	`Floor Movement`	Every move logged
4. Block for staff	Holds tags for any staff member's deal	`Block Tags`	Blocks expire or get released
5. Ready for Sale	Receives graded tags from Final QC	`Ready for Sale`	Grade visible on every tag
6. Scrap & warranty	Scraps dead tags; extends warranties	`Scrap, Extended Warranty`	Reason recorded for each

3. Production Manager

Runs the repair line from L1/L2 to Final QC: plans lots, moves tags to engineers, reassigns work, and reports team productivity.

3

Team: Production
App role: `custom role`
Where they work: On the floor with engineers; checks progress on a laptop through the day.
Main modules: Production Manager, Lot Estimation, WorkID Status, Reports

GOALS

- Every lot repaired within its budget
- No tag stuck between stages
- Fair, visible productivity per engineer

FRUSTRATIONS

- Parts budgets guessed, not estimated
- Learning late that a tag is waiting
- Reassigning work when someone is absent

User journey

Step	What they do	Where in the app	Pain point / idea
1. Estimate lot	Works out parts needed and repair budget	`Lot Estimation`	Budget set before repair starts
2. Move to L1/L2	Sends tags from production to engineers	`Production Manager`	Bulk move with assignee
3. Monitor line	Watches tags from L1/L2 through Final QC	`Production Manager`	One view of every stage
4. Reassign	Moves work to another engineer	`Production Manager`	Keeps history of who worked
5. Productivity	Reports output per engineer and team	`WorkID Status, Reports`	Ageing per WorkID, CSV export

4. Repair Engineer (L1/L2, L3/L4)

Repairs devices: diagnoses each tag, requests parts, records PNA when a part isn't available, and scraps tags beyond repair.

4

Team: Workshop
App role: `l1 / l2 / l3_engineer`
Where they work: Shared bench PC between repairs, so every extra click costs bench time.
Main modules: L1/L2 Repair, L3/L4 Repair, Part Request, PNA

GOALS

- Finish more devices per shift
- Get parts without walking to stores
- Credit for every job

FRUSTRATIONS

- Part requests with no status
- Waiting on PNA with no update
- Devices failed back with no clear reason

User journey

Step	What they do	Where in the app	Pain point / idea
1. Pick work	Opens assigned tags; starts a WorkID	`L1/L2 Repair`	Queue in priority order
2. Diagnose & repair	Finds the fault and fixes it	`L1/L2 Repair`	IQC report and history at hand
3. Part request	Raises a request for the parts needed	`Part Request`	One row per part, with status
4. PNA	Submits Part Not Available when stock is out	`PNA Submission`	Alert when the part arrives
5. Escalate	Sends hard cases up to L3/L4	`L3/L4 Repair`	Reason travels with the tag
6. Complete or scrap	Passes to Stress Test, or marks scrap	`L1/L2, L3/L4`	Scrap reason required

5. QC Inspector (Stress Test)

Tests every repaired device: runs the stress test, installs the OS, runs system diagnostics, then completes or fails it.

5

Team: Quality
App role: `qc_inspector`
Where they work: Test bench with several devices running tests and OS installs at once.
Main modules: Stress Test, OS Installation, System Diagnose

GOALS

- No faulty device moves forward
- Clear fail reasons for engineers
- OS installed and checked on every device

FRUSTRATIONS

- Repeating the checklist by hand
- Devices returning with the same fault
- Waiting on long tests with no queue view

User journey

Step	What they do	Where in the app	Pain point / idea
1. Receive	Picks up tags completed in repair	`Stress Test`	Queue with filters like L1/L2
2. Stress test	Runs the stress checklist	`Stress Test`	Report saved with the tag
3. OS install	Installs and activates the OS	`Stress Test`	OS status recorded
4. Diagnose	Runs system diagnostics	`Stress Test`	Results attached to the tag
5. Complete or fail	Moves forward to Cosmetic, or fails back	`Stress Test`	Fail reasons go with the tag

6. Cosmetic Lead

Runs the cosmetic chain: Cleaning, Putty, Dry Sanding, Masking, Painting and Water Sanding, then completes or fails each tag.

6

Team: Cosmetic
App role: `cosmetic_manager`
Where they work: Leads a crew of workers moving tags between stations all day.
Main modules: Cosmetic Received, Cosmetic Chain, Devices Passed

GOALS

- Batches move between stations quickly
- Fair credit for each worker
- Finish quality that passes Final QC

FRUSTRATIONS

- Moving tags one by one
- Credit to whoever clicked, not who worked
- Failed tags with no reason

User journey

Step	What they do	Where in the app	Pain point / idea
1. Cleaning	Cleans the body and screen	`Cosmetic Chain`	Batch assign to one worker
2. Putty	Fills dents and scratches	`Cosmetic Chain`	Mover credited automatically
3. Dry sanding	Smooths the putty	`Cosmetic Chain`	Selections kept while searching
4. Masking	Masks ports, logos and screens	`Cosmetic Chain`	Tag Number shown first
5. Painting	Paints the body	`Cosmetic Chain`	Station time visible
6. Water sanding	Final finish; complete or fail	`Cosmetic Chain`	Complete → Final QC, or fail back

7. Final QC Inspector

The last check before sale: diagnoses each device by hand and assigns its grade, or fails it back to the stage that needs rework.

7

Team: Final QC
App role: `qc_inspector / custom`
Where they work: Final QC desk, checking each device in person before it reaches Ready for Sale.
Main modules: Final QC, Grading, Search Tags

GOALS

- Only sale-ready devices pass
- Grades that match the device
- Failed tags reach the right stage

FRUSTRATIONS

- Grade rules that differ between people
- Missing part and repair history
- Deciding which stage a fail goes back to

User journey

Step	What they do	Where in the app	Pain point / idea
1. Receive	Picks up tags completed in Cosmetic	`Final QC`	Full history on one screen
2. Manual diagnose	Checks the system by hand	`Final QC`	Checklist by model
3. Assign grade	Grades the device	`Final QC`	Grade rules shown beside the field
4. Fail back	Sends to L1/L2, Stress or Cosmetic	`Final QC`	Pick the stage and the reason
5. Complete	Moves to Ready for Sale (Inventory)	`Final QC → Ready for Sale`	Grade travels with the tag

8. Spare Parts Manager

Runs the parts store: books new parts through Parts GRN and harvested parts from scrap, and fulfils engineers' part requests.

8

Team: Stores
App role: `spare_parts_manager`
Where they work: Between the store counter and the racks; engineers come here when a repair stalls.
Main modules: Parts Manager, Parts GRN, Part Requests

GOALS

- Fill every request the same day
- Use harvested parts before buying new
- Exact stock per part and shelf

FRUSTRATIONS

- Requests bundling several parts in one row
- Harvested parts not booked
- PNA requests with no follow-up

User journey

Step	What they do	Where in the app	Pain point / idea
1. Parts GRN	Books As New parts from vendors	`Parts GRN`	Price and qty captured once
2. Harvest inward	Books As Harvest parts from scrapped tags	`Parts Manager`	Harvest linked to its source tag
3. Fulfil requests	Works through engineers' requests	`Parts Manager`	One row per part
4. Issue	Issues parts; consumption recorded	`Parts Consumption`	Date filter covers consumption
5. Close PNA	Fills PNA requests when parts arrive	`Parts Manager`	Alert to the engineer

9. Sales Executive

Sells Ready for Sale stock: blocks tags, submits and records sales, raises delivery challans, and handles returns and rentals.

9

Team: Sales
App role: `sales / sales_manager / telecaller`
Where they work: Calls with dealers and customers, working from the Ready for Sale list.
Main modules: Ready for Sale, Block Tags, Sales, Gate Pass, Returns, Rentals

GOALS

- Answer 'do you have this model?' in seconds
- Never sell a held tag
- Returns resolved the right way, fast

FRUSTRATIONS

- Stock that looks free but is blocked
- Retyping sale details for the challan
- Choosing the right return type

User journey

Step	What they do	Where in the app	Pain point / idea
1. Check stock	Filters Ready for Sale by model and grade	`Ready for Sale`	Fast filters and exports
2. Block	Holds tags for a deal	`Block Tags`	Blocked tags clearly marked
3. Sell	Submits the sale; marks items sold	`Sales, Sales Report`	The only way into Sold
4. Dispatch	Raises the delivery challan / gate pass	`Gate Pass`	Challan from the sale record
5. Returns	Return, paid repair, replacement, or credit note	`Returns, Credit Note`	Type decides where the tag goes
6. Rentals	Rents out devices and tracks them	`Rentals`	Due dates always visible

10. Accounts

Closes the money loop: generates invoices and e-way bills, records payments, and checks the sales list and daily stock.

10

Team: Finance
App role: `custom role`
Where they work: Accounts office, working from sales, bank statements and the app.
Main modules: Invoices, E-way Bill, Payments, Sales List, Daily Stock

GOALS

- Invoice and e-way bill out with every dispatch
- Every sale matched to a payment
- Daily stock that matches the books

FRUSTRATIONS

- Retyping sale details into invoices
- E-way bills generated outside the app
- Payments with no sale reference

User journey

Step	What they do	Where in the app	Pain point / idea
1. Invoice	Generates the invoice for each sale	`Invoices`	Built from the sale record
2. E-way bill	Generates the e-way bill for dispatch	`E-way Bill Generator`	Ready before the vehicle leaves
3. Payments	Records customer and supplier payments	`Payments`	Outstanding per customer
4. Sales list	Checks sales against invoices and payments	`Sales List`	Paid / due on every sale
5. Daily stock	Reviews opening and closing stock	`Daily Stock`	Matches the books

11. Managers / Admin

Runs the business from the numbers: dashboard, reports and P&L, and resolves the tickets users raise.

11

Team: Management
App role: `admin / Sub Admin`
Where they work: Reads dashboards and reports daily; reviews P&L weekly.
Main modules: Dashboard, Reports, P&L, User Tickets

GOALS

- Stock, cash and profit by lot at any time
- Slow stock and margin leaks spotted early
- User problems resolved quickly

FRUSTRATIONS

- Dashboard numbers that disagree with pages
- Reports exported and reworked in Excel
- Tickets with no owner

User journey

Step	What they do	Where in the app	Pain point / idea
1. Dashboard	Stock by stage, money and weekly trends	`Overall Dashboard`	Tiles match their pages
2. Reports	Sales, stock and team reports	`Reports`	Excel export for meetings
3. P&L	Profit by financial year and by lot	`Business P&L, Lot P&L`	Lot margin at a glance
4. User tickets	Reviews and resolves raised tickets	`Ticket Queue`	Owner and status on each

12. TRC Manager

Leads the TRC: oversees the Inventory, Spare Parts and Production teams, approves warranty extensions, and owns daily stock and audits.

12

Team: TRC
App role: `custom role`
Where they work: Moves between teams through the day; reviews numbers each morning and evening.
Main modules: Inventory, Spare Parts, Production, Extended Warranty, Daily Stock, Physical Audits

GOALS

- Teams hand off without delays
- Daily stock and audits always clean
- Warranty extensions handled fairly

FRUSTRATIONS

- Problems surfacing only at audit
- Three teams' status in three places
- Warranty requests with no history

User journey

Step	What they do	Where in the app	Pain point / idea
1. Daily stock	Reviews opening and closing stock by stage	`Daily Stock`	Exceptions flagged first
2. Inventory team	Checks Stock In, floor moves, Ready for Sale	`Inventory Manager`	Ageing per stage
3. Spare Parts team	Checks requests, PNA and parts stock	`Parts Manager`	Open PNA count
4. Production team	Checks the repair line and productivity	`Production Manager`	Bottleneck stage highlighted
5. Warranty	Approves warranty extensions	`Extended Warranty`	Device history on the request
6. Audits	Runs physical and zone audits	`Physical Audits`	Gaps listed by location
